

Adhesive Surface Electrodes

Friendship Disposable Adhesive Surface Electrodes are designed for use in EMG, EEG and EP with low impedance for optimal signal quality. The surface electrodes combine silver/silver chloride conductive film and conductive gel. Once applied, the signals between the electrode pad and the skin are transmitted by a layer of irreversible high-tech material made from Ag/AgCl and thin electrolyte.

The long-lasting adhesiveness and skin-friendly gel ensure reliable measurements even when the electrode has been repositioned for optimal signal measuring. Both the electrode sensor and the wires on the surface electrode are made from a soft flexible material for improved patient comfort.

If you need a product not shown in our product portfolio, or require a product modification to meet your exact needs, please contact our sales office. Our representatives will be happy to discuss your requirements and where possible find a solution.

Ground Electrode, Pre-Gelled

Friendship Disposable Ground Electrodes Pre-Gelled come with a convenient pad size of 35 x 50 mm to ensure the optimal signal. The electrode has long-lasting adhesiveness making it ideal for EMG and EP testing.

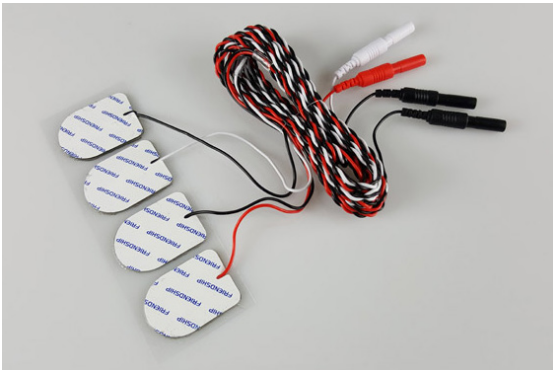

- Individually packaged
- Available in boxes of 24
- Non-sterile
- Single patient use only

Surface Electrodes, Pre-Gelled

Friendship Disposable Surface Electrodes Pre-Gelled are made with a special "duck foot" shape that comes in two different sizes as standard. This shape, combined with the long-lasting adhesiveness and skin-friendly gel, ensure that the electrode stays in place and delivers reliable measurements, even if it is repositioned or the wire is adjusted during the examination. All Surface Electrodes Pre-Gelled are available with single or twisted wires and with different wire colors and lengths.

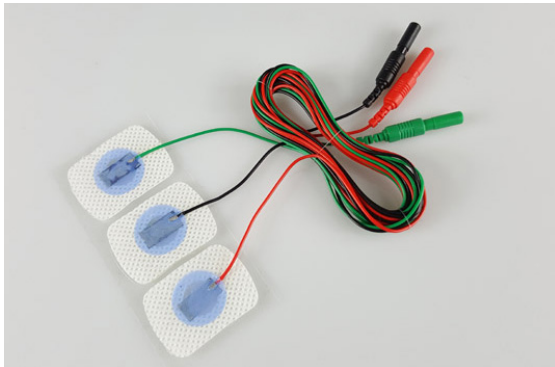

- Non-sterile
- Individually packaged in sets
- Single patient use only

Disposable Adhesive Surface Electrodes

Adhesive Surface Electrodes NCS

Friendship Disposable Surface Electrodes for Nerve Conduction Studies (NCS) are designed with a reduced measuring area for greater precision when locating the target area. The long-lasting adhesiveness and skin-friendly gel ensure reliable measurements even if the electrode is repositioned. We also offer one non-gelled version of the NCS Electrode for customers who wish to use their own gel.
